

How is preschool language related to reading?

Researchers at University College London (UCL) are conducting an exciting research study called “**Preschool Language and Literacy**” and we are looking for new children and nurseries to participate.

We aim to understand how preschool language and emerging literacy skills are related to later reading ability.

Why is this research important?

Some hearing children and many deaf children find learning to read challenging. It is therefore important to identify children who may struggle with reading BEFORE they start learning to read. Early identification will help ensure that children who need it have appropriate support as they begin learning to read.

What happens when a child takes part in the project?

When a child takes part in the project, we will assess them on a range of tasks that measure early language skills. This will be done over 3 short sessions which last about 20 mins each. All assessments are child-friendly, age-appropriate and fun for children to complete. We will re-test all the children when they are in reception, year one and year two.

Do you know any children who:

- ✓ Are 3-4 years old
- ✓ Use **spoken language**
- ✓ Have no significant additional educational needs

If you are a parent or professional who knows a child who could take part and would like to get involved, please contact:
